Suggested next maintenance

Facts only — nothing is invented. This line is computed in the app from data you already entered: tasks and intervals in the schedule table above, the **real odometer** stored for this vehicle, and your **service history** (every row below, plus "Last done" on each schedule row). It does **not** use AI here and cannot add maintenance you never listed.

For date-based intervals with no prior service date in that history, the app counts months from **January 1 of the vehicle model year** only as a calendar anchor — it still does not assume any work was performed.

Engine Air Filters Replacement — −20,000 mi past interval · 474 days past date interval

If this looks off, check that odometer, schedule intervals, and service history match reality — the suggestion only reflects what's in those fields.

Service history

Log done on a task above, or **add a manual entry** for work that isn't on your schedule. Separate from what's due next.

+ Add manual log

Date	Task
Apr 9, 2026	Check seat belts and buckles for dam
